Messrs Mariteam A/S,

after the communication that we received from the Swedish Transport Agency on the 10th of November 2009 concerning a product of ours (Altura lifebuoy 2,5 kg), we would like to ask you with a certain urgency to check if you or your customers still have any piece of this model of lifebuoy with date of production January 2004.

If you will find it, you will have to make a simple test consisting in the following steps:

1. To weigh the lifebuoy;
2. To remove one of the four reflective tapes covering the hole;
3. To check if the lifebuoy is full of foam material.
4. If the lifebuoy isn't full of foam material it's necessary to put it in water for some minutes to let come the water inside the lifebuoy.
5. To weight the lifebuoy and to compare this result with the first one; the difference **hasn't to exceed 400 gr.**

In the case of higher difference between the two weights, **the lifebuoy will have to be eliminated from the safety equipment of the ships** and immediatly sent back to the supplier.

Veleria San Giorgio will replace it as soon as possible.

Thanking you for the kind cooperation,

with our best regards

Mr Anton Francesco Albertoni
General Manager
Veleria San Giorgio Srl
